XLO™ Updates Signature 3™ and Reference 3™ Cable Lines ***Hear more deeply and feel more connected to music than ever before***

Reference 3
R3-1

Signature 3
S3-10

The XLO Sound or Lack Thereof...

XLO [Signature 3](#) and [Reference 3](#) series cables are expertly engineered to deliver exceptionally neutral sound, tight, powerful bass, and an engaging midrange plus clean and extended highs. XLO's quasi-random Field-Balanced Surface/Diving Winding Geometry™ minimizes frequency-related phase-shift because no conductor has a regular position within any grouping so XLO cables work better with a greater number of components.

Both lines feature exclusive WaveLink™ Technology, ultra-low capacitance dielectric insulation, low-capacitance, low self-inductance, hand-terminated 24K mil-spec direct gold-plated RCA connectors and a cable identification ring.

But no one buys cable for their technical achievements; they just want their systems to sound better! XLO Signature 3 or more cost-effective Reference 3 allows anyone to hear more deeply and feel more connected to music than ever before.

How Revealing is Your System?

The surprisingly modest prices of the Reference 3 series gets you well on the way to Signature 3's sound, the major difference being the conductors in Reference 3 are 99.99998% or 6-nines pure laboratory-grade copper while the higher specified Signature 3 calls for UPOCC or Ultra-Pure Ohno Continuous Cast 6-nines copper. The Reference 3 uses high-performance non-fluorinated polymer insulation while the Signature 3 makes use of the more costly PTFE-variant. If you're running a very high resolution system choose Signature 3, if you're still moving up the resolution ladder, go for Reference 3 and upgrade later!

XLO's Reference 3 AC Power Cord is a popular seller featuring double shields and double grounds that reject EMI, RFI and system-generated noise above 60Hz as a result lowering distortion. High-current transfer rates and transient speed allows your carefully chosen components to sing!

Positive Feedback said of Signature 3, "Great for high-end audio systems... Represents good value and provides all-around excellent sound." UltraAudio.com called XLO Signature 3 "The Holy Grail of Neutrality... I'm tempted to describe the XLOs as Regal..." And Dagogo.com opined "I didn't realize how much my other cables added to the sound until listening at great length to the XLO Signature 3."
